MODULAR BAR SYSTEMS

PREMIER CATERING  
MANUFACTURE

### Premier Catering Manufacture Ltd

- leading specialists in the design and manufacture of bespoke metal fabrication throughout the UK.

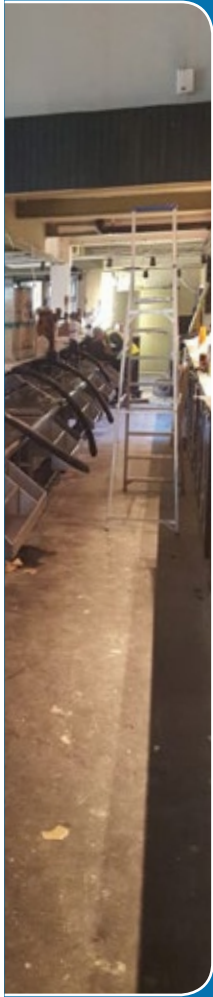

From our fully equipped factory in Blackburn our craftsmen have the enthusiasm and skills to produce everything from modular tables to bespoke hospitality bars and large-scale extraction systems.

We are passionate about our work and, wherever possible, keen to have involvement right from the embryonic stage of any fabrication project. This allows us to provide you the customer with the services of our dedicated design studio - who will take your initial moment of inspiration and develop it into a spectacular 3D visual scheme.

Once approved we analyse the most cost-effective and timely solution to turn the design into a top-quality finished product where, as a minimum, we strive to meet or exceed customer expectation.

This philosophy has helped us to strengthen and develop year-upon-year with a diverse customer base right across mainland UK and Ireland.

## Fabrication

We understand the merciless rigours of commercial kitchens and similar environments better than most. Our catering equipment is therefore designed & built to last with consideration to features that set us apart from others:

- Standard dimensions or bespoke to fit even the most awkward of areas
- Benches with high-grade stainless steel working surfaces, rolled edges and welded legs; with or without welded splash-backs and power sockets
- Storage cupboards with concealed hinges
- Racking with adjustable load-rated shelves
- Fully welded sink units

Function does not always mean lack of form. We can manufacture accordingly for back-of-house areas and also customer-facing areas.

### Canopies & Extraction

Extraction canopies for kitchens and hot food cooking areas are a vital (and legal) requirement for removal of heat, odour and grease from the atmosphere. All our canopies are designed, built and installed to specific customer requirement, again, with simplicity and ease of use paramount:

- Full stainless steel washable construction with minimal areas for accumulation of dust & dirt
- Removable filters and grease traps
- Adjustable fans
- Matching stainless steel wall cladding or white UPVC food-safe wall cladding
- LED incorporated lighting, if required.

We also design, fabricate and install extraction systems for factories and similar commercial premises.

## Bars

A busy and crowded drinks bar relies upon practical and durable preparation facilities. With this in mind we have developed a versatile range of modular stainless steel fabricated bar equipment to fulfil this requirement that features:

- worktops with rolled edges
- glass washing sinks and hand-wash sinks with infra red taps
- glass storage racks with vented shelves
- ice bins
- space for dishwashers, bottle chillers and under-storage

We can manufacture this bar system in repeat modular format for multiple outlets or bespoke one-off installations.

### Hot Cupboard

A noticeable gap in the market for durable mobile prepared hot food storage cupboards led us to design and fabricate our own range of "Mackline" cupboards. Whether for use in a busy kitchen or at outside catering event we have incorporated many features that will provide maximum flexibility and usability in prepared hot food storage:

- heavyweight stainless steel construction for maximum insulation and heat retention
- sliding cupboard doors on heavy-duty rollers or hinged cupboard doors with concealed hinges
- heavy duty lockable castors
- easy-clean interior with removable shelves
- 13A spiral power cable plus illuminated power switch and adjustable digital thermostat

### Heated Food Counter

For hot food eateries, take-away sandwich shops and similar outlets we have developed a unique all-in-one fabricated solution for the display and storage of prepared hot food.

Our **Mackline** hot storage cupboard is fitted with a heated display deck (ceramic or stainless steel) and then mounted with our fabricated infra-red heated gantry for maximum product heat retention. A toughened glass screen and canopy is fitted for assisted service applications or can be left open for pass-through usage.

The versatility of this counter allows it to be mobile and also clad to match any preferred décor.

Our heated gantry can also be supplied individually as an addition or upgrade for existing hot food bars.

### Design & Planning

Simply - we are proud of our dedicated design studio and the talent of our designers.

Continual investment in the latest possible hardware & software means that we can always offer you the epitome in 3D visuals and - hopefully - surpass expectations.
